Integrate and follow up

Astral customer discovery
Activity 6 of 7 · Draft for review · October 2026

Activity 6
Integrate and follow up

Purpose 03

What happens 05

Joint evidence 06

Schedule 08

Objectives 09

Consent and data 10

Risks 11

Output 12

ACTIVITY 6 OF 7

Integrate and follow up

Bring the evidence together, investigate disagreement, and refine archetypes and journeys.

PROVISIONAL DURATION

About 2 weeks

DEPENDS ON

Survey results. Follow-up participants

OUTPUT

Refined archetypes, journeys, a service blueprint where needed, contradictions, and priorities.

OBJECTIVES IT SERVES

- 2. **Identify** recurring behavioural patterns that need different design priorities or trade-offs.
- 5. **Determine** where problems come from the service, process, or data rather than the interface.

THE SEVEN ACTIVITIES

1	Agree scope and decisions
2	Set up recruitment
3	Discovery round 1
4	Discovery round 2, targeted
5	Survey
6	**Integrate and follow up**
7	Test design implications

PRIMARY RESEARCH QUESTION

How do IMSERV customers do their energy-data work today, and which differences in that work should change how Astral is designed and prioritised?

IMSERV®

What happens

What happens

Bring the evidence together, investigate disagreement, and refine archetypes and journeys.

1

Bring the evidence together

Compare interviews, walkthroughs, and the survey in one joint evidence table.

2

Mark each relationship

Each relationship is marked supporting, complementary, conflicting, or insufficient.

3

Investigate disagreement

Disagreement is investigated, not smoothed away. Short follow-up sessions are used where contradictions matter.

4

Refine archetypes and journeys

Add a service blueprint of the internal processes behind the journey for cross-department issues.

Triangulation does not mean three sources agreed, so it is true. Sources can share a bias.

Joint evidence table

Interviewing and surveying the same customer champions adds detail, not independent coverage.

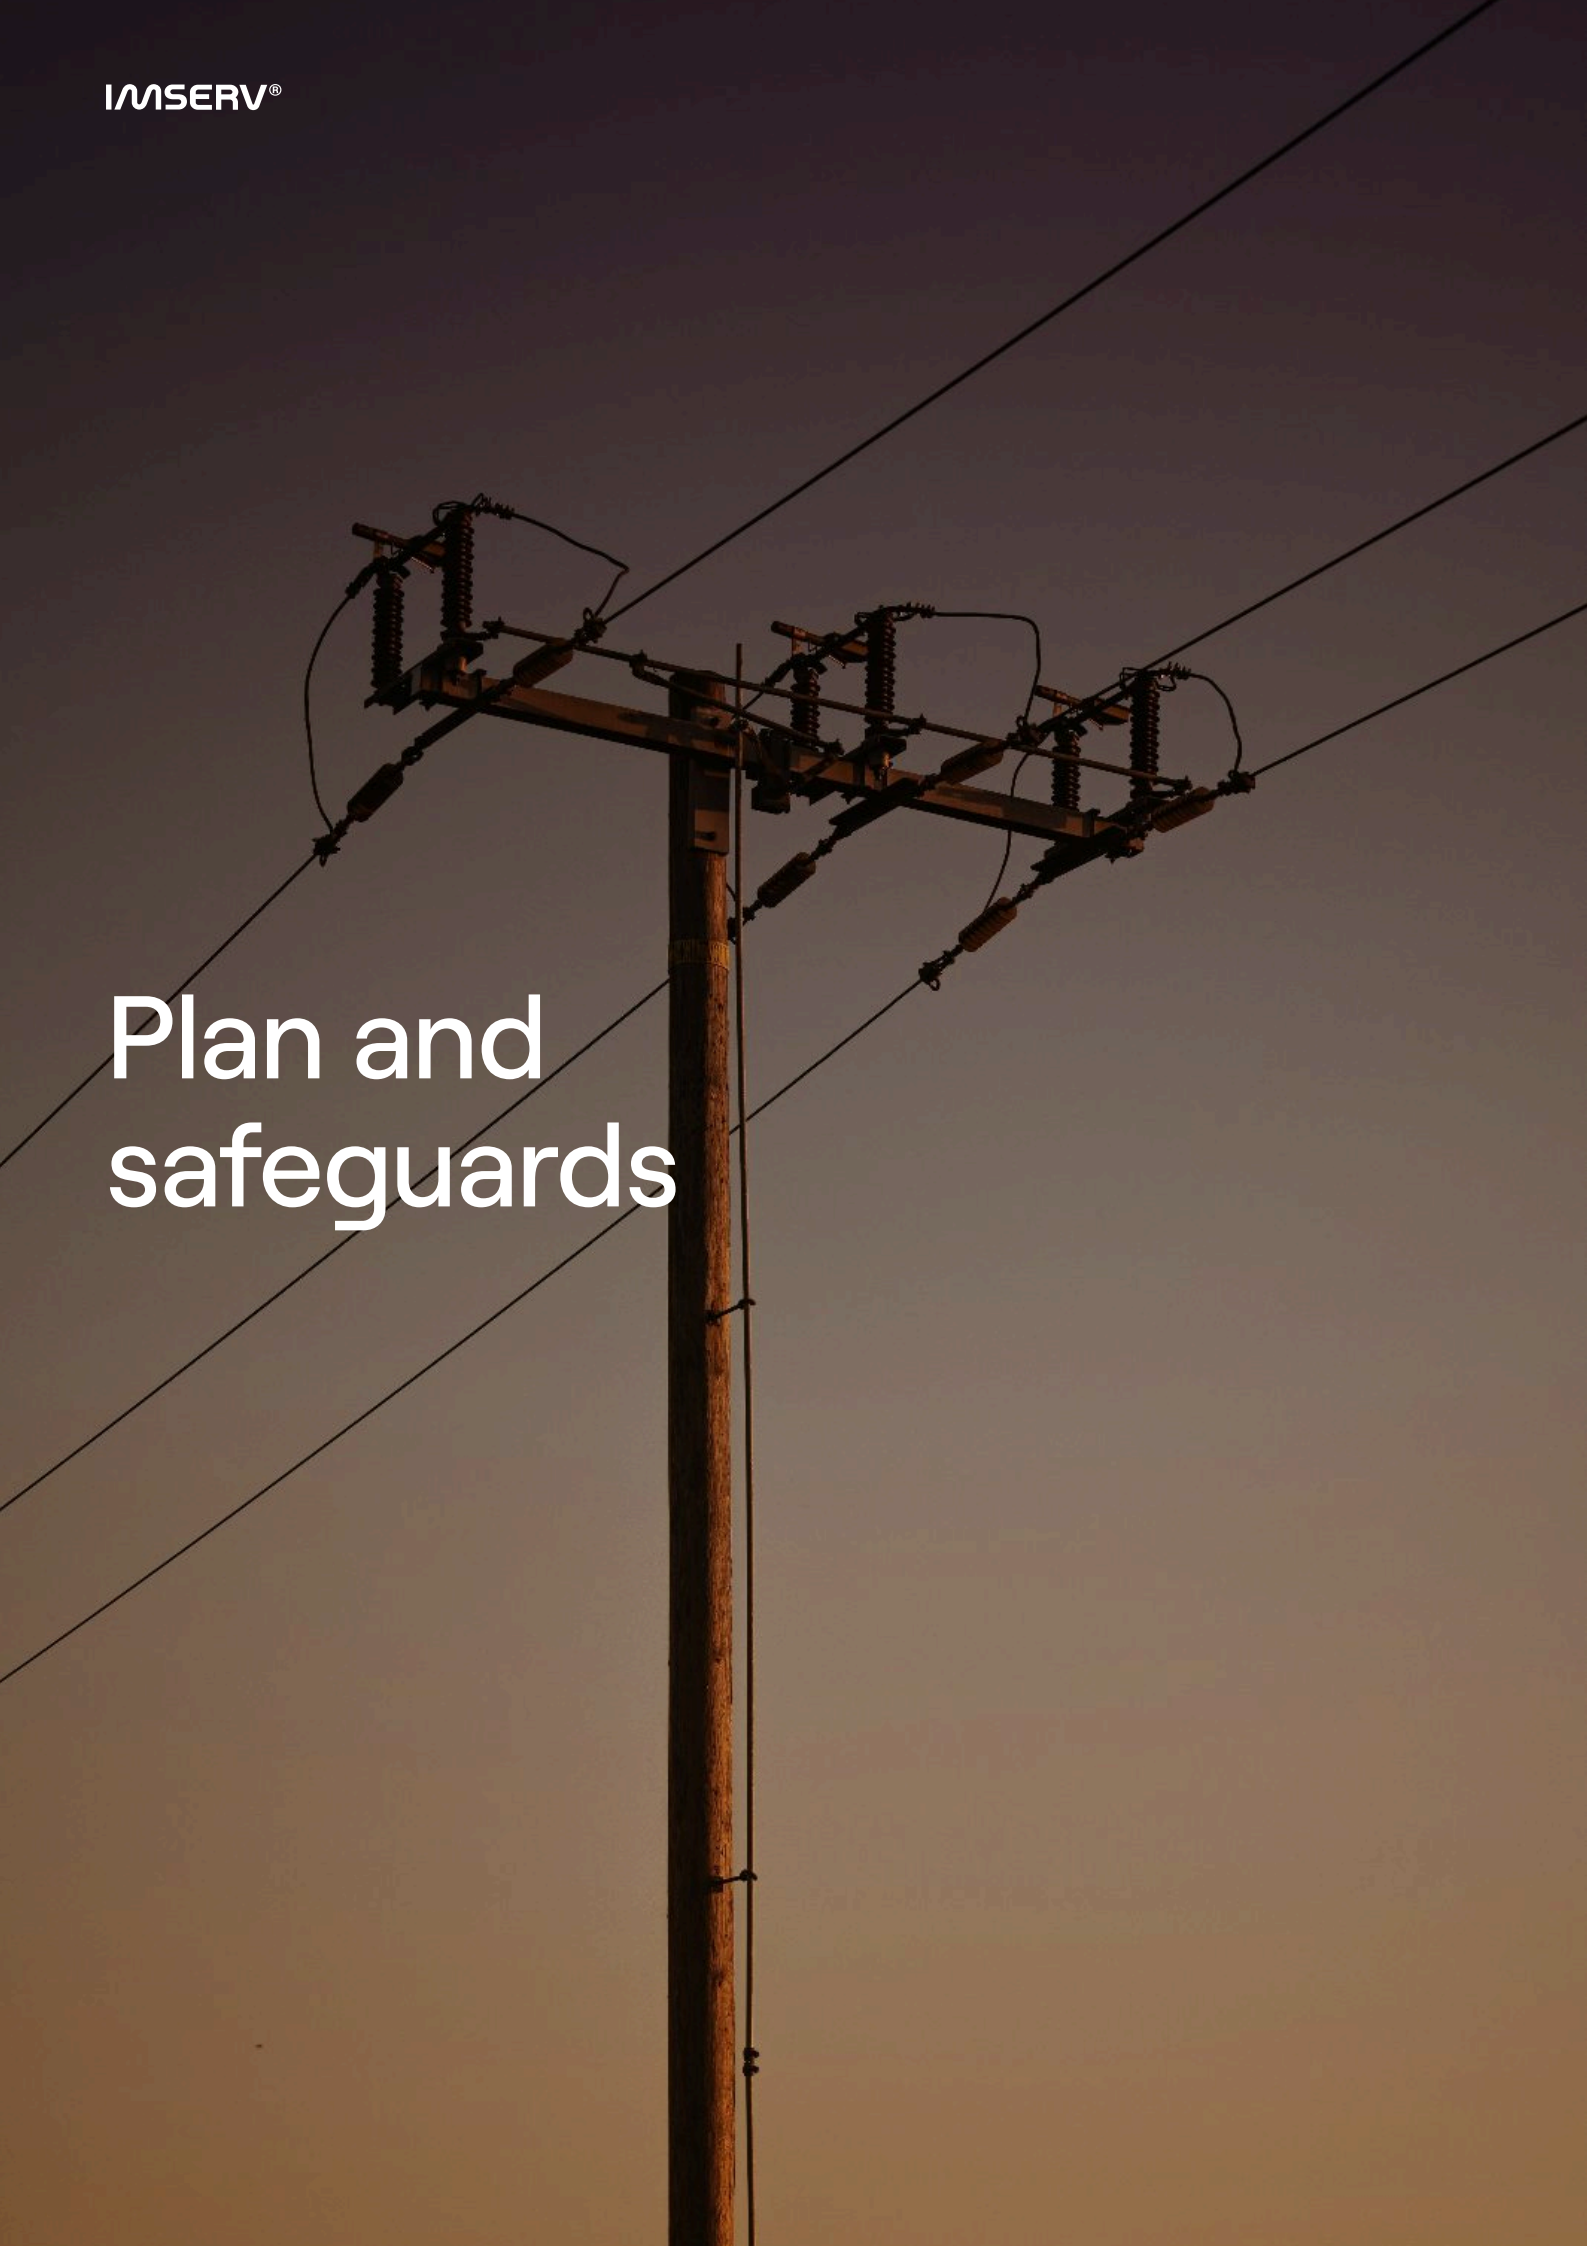

Research question	Interview	Walkthrough or artefact	Survey	Interpretation and next action
What makes a report trustworthy enough to share?	How people explain their checks and concerns	The actual checking steps and supporting material	Reported frequency across contexts	Supported needs, exceptions, and what is still uncertain
Where does issue resolution break down?	Accounts of ownership and waiting	Handoffs and correspondence	Reported occurrence and consequences	Separate interface problems from service-process problems

Each relationship is marked:

SUPPORTING COMPLEMENTARY CONFLICTING INSUFFICIENT

For example, someone may say they use the portal for reporting. A walkthrough may show the final report is built elsewhere. That is not dishonest. Reporting may mean getting the starting data.

IMSERV®

Plan and safeguards

Where it sits

Estimates to agree, not commitments. Bars show the upper estimate for each stage. With overlap, roughly 12 to 18 weeks from agreement to tested implications.

Stage	Provisional duration	Depends on
6. Integrate and follow up	About 2 weeks	Survey results. Follow-up participants

Objective-to-evidence

How this activity answers the objectives. Measures serve an objective. They are not collected for their own sake.

Objective	Research question	Evidence	Measure
2. Identify	Which patterns recur across organisations, roles, and scales?	Coded episodes across participants and organisations	Patterns observed in n of N participants and organisations
5. Determine	Where does it slow down, and why?	Breakdowns traced to cause	Problems classed interface, process, or data

Neutral draft. No consent wording is sent until it is approved. Legal review before it reaches a participant.

Consent, privacy and data

Agreed with IMSERV's privacy and data-protection owner before the first session.

Every session

- Informed consent for every participant before the session
- Recording, transcription, storage, retention, and any AI processing agreed with IMSERV's privacy and data-protection owner before the first session
- Approved storage with restricted access. Raw recordings and transcripts stay restricted
- Customer documents shown in walkthroughs are redacted or not kept, as agreed
- Participants are P01, P02 in analysis. Removing names alone may not anonymise a distinctive business account
- Quotes in shared outputs only with consent for anonymised quotation
- No consent wording is sent until it is approved. The current wording is a neutral draft

How AI is used

Copilot can help organise approved material, suggest candidate patterns, and keep evidence links up to date. Only within what the privacy owner approves.

It will **not** invent quotes, build archetypes from job titles, or treat simulated customers as evidence.

Risks and limits

What could weaken the evidence, and what we do about it.

Risk	Effect	Mitigation
Participants come from one or two organisations	Shared local process looks like a pattern	Track organisation coverage. Recruit across several
The survey reaches only engaged customers	Patterns look more common than they are	Report respondents, not customers. Name the sampling limits
Archetypes are expected before evidence exists	A persona deck without support	Agree upfront that archetypes emerge from rounds 1 and 2

Refined archetypes, journeys, a service blueprint where needed, contradictions, and priorities.

Output

Early findings reach the BA team from round 1, not only at the end.

Hands over to

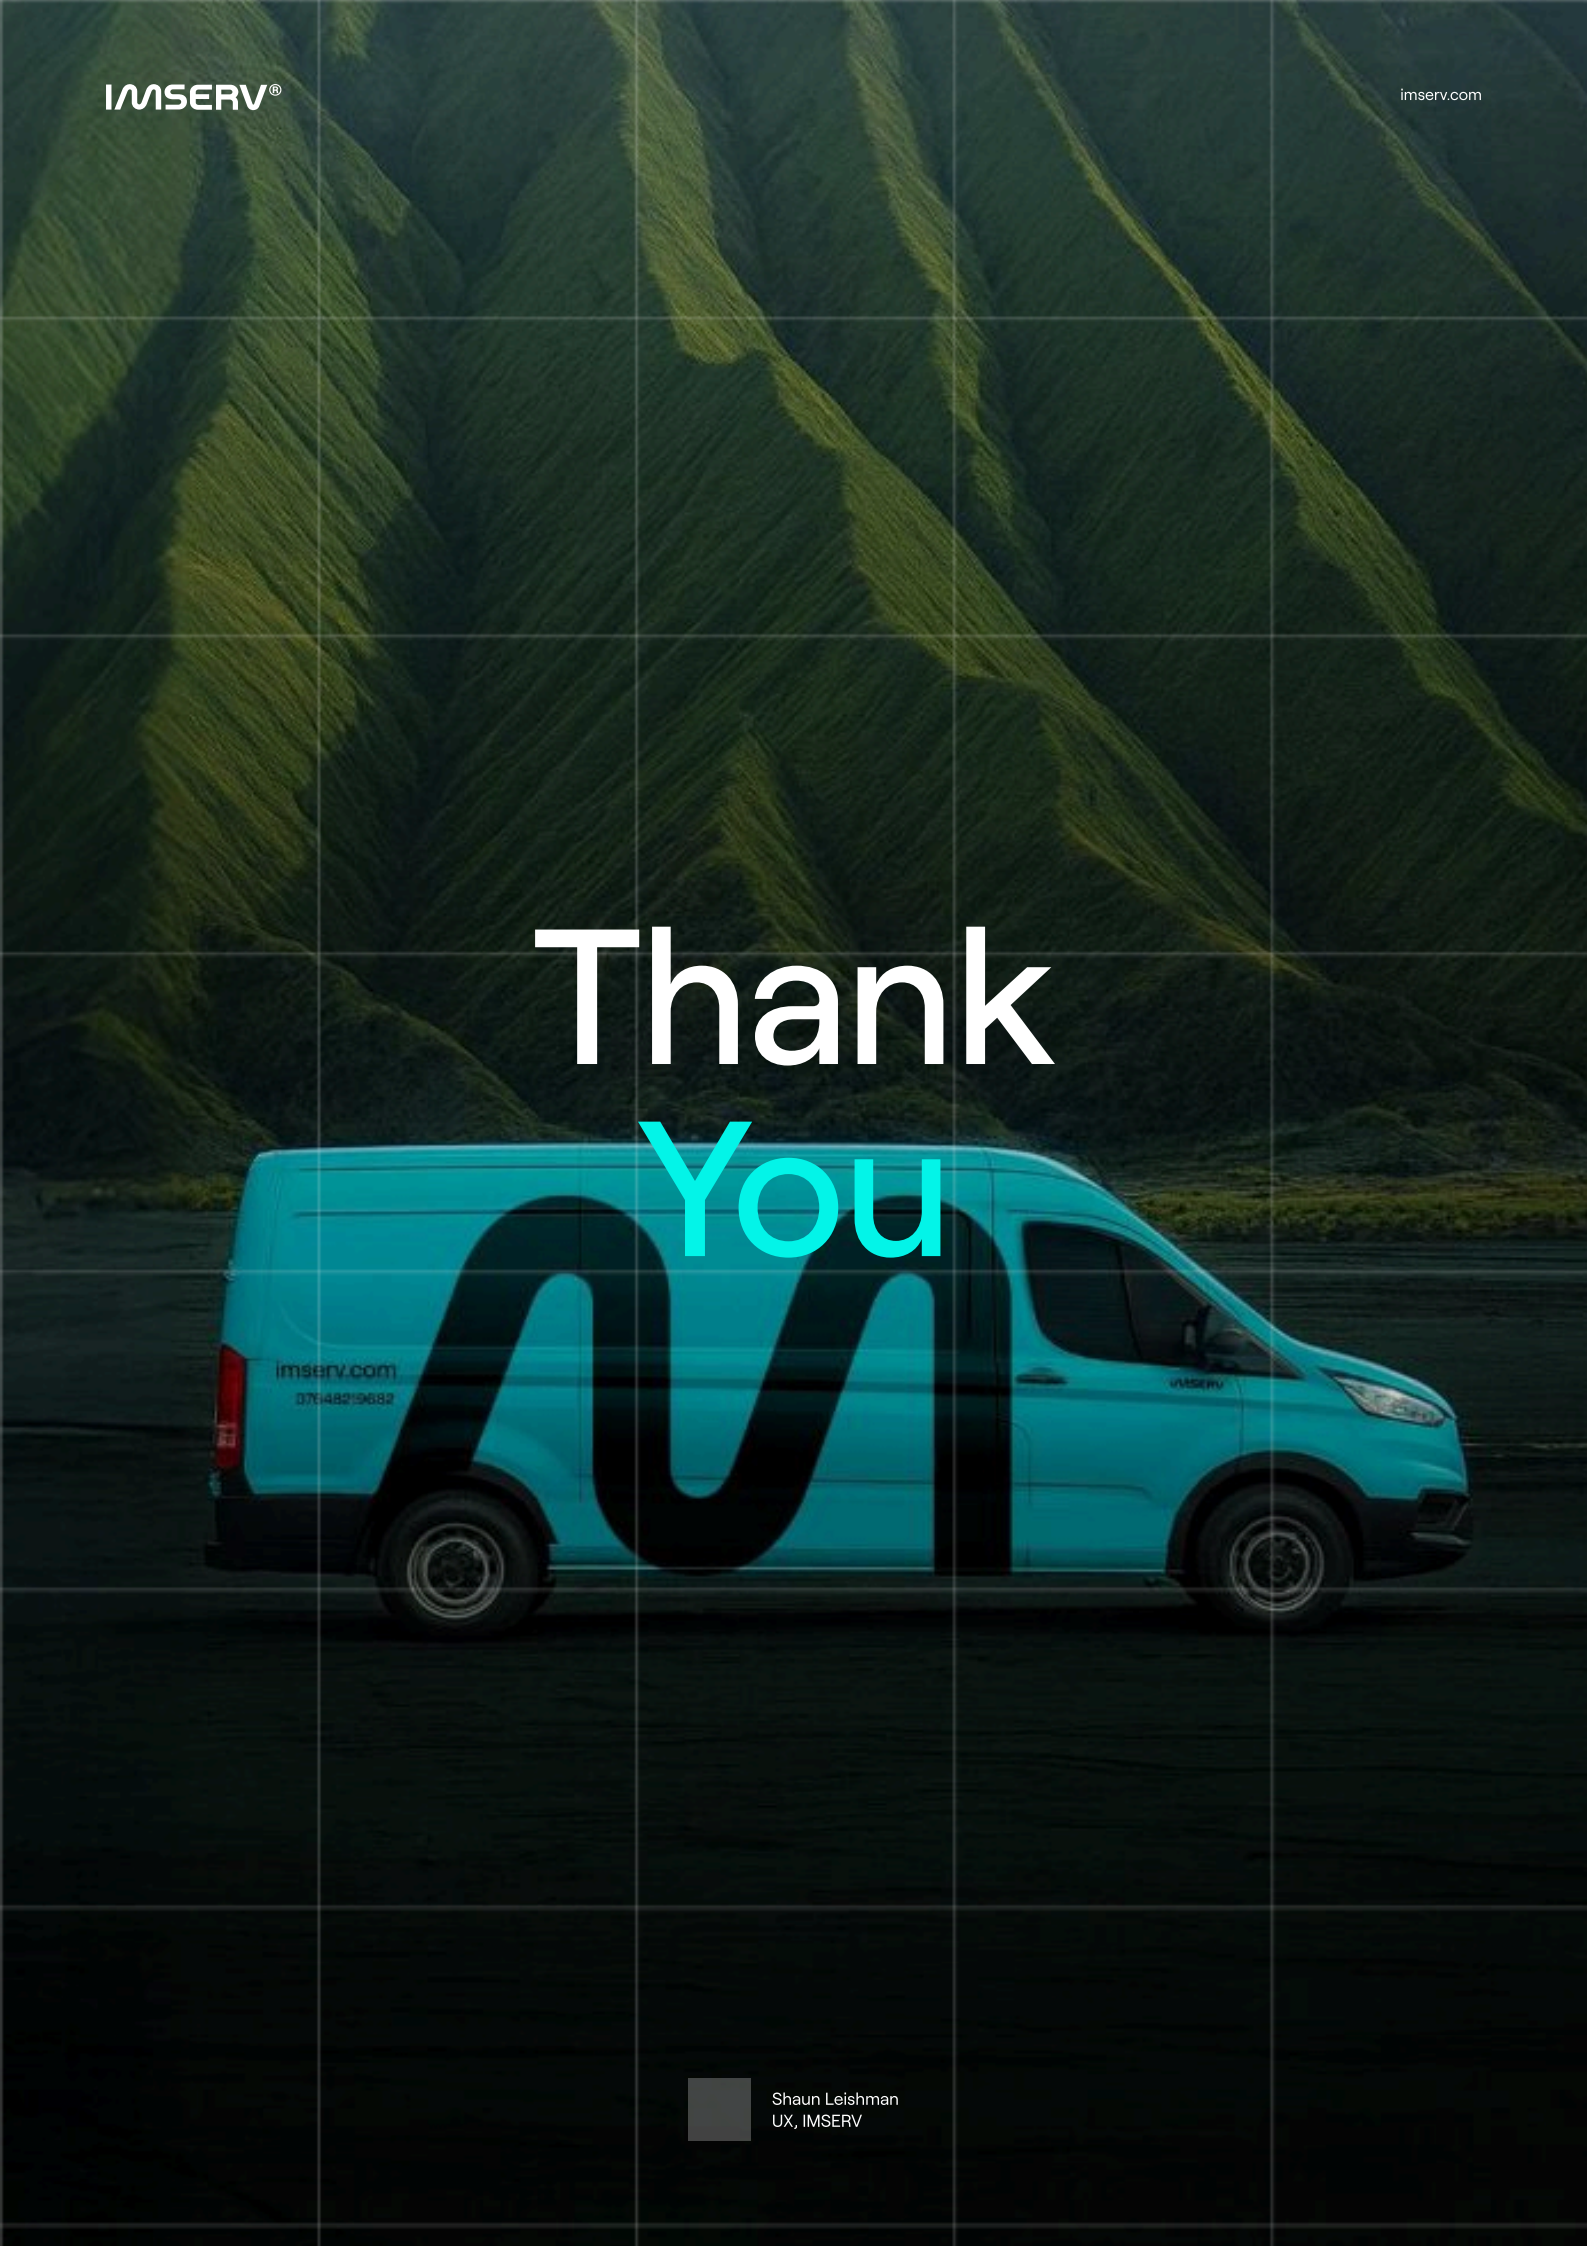

Activity 7. Test design implications.

Check whether proposed changes address the needs we found.

Working alongside the BA team

- Round 1 findings are shared with the BA team as they emerge, marked provisional
- Stories link back to the need and evidence behind them
- The BA team (Claire and others) can bring open story questions into round 2

Thank You
